

AI Data Collection & Human Feedback Platform

1. Project Overview

Our project aims to build a **freelancer-based human data collection and AI evaluation network** that provides high-quality datasets and human feedback to AI companies, research organizations, startups, and data-collection companies.

The platform will connect **freelancers with AI data-collection projects** involving voice, video, first-person (FPS/P.O.V.) recordings, and AI response evaluation.

2. Services We Provide

1. Voice Recording

What we do:

- Record predefined sentences
- Record questions and answers
- Record natural speech
- Record conversations
- Record different speaking styles and environments

AI applications:

- Speech recognition
- Voice assistants
- Text-to-speech / speech-to-text
- Accent and pronunciation training

Requirements:

- Smartphone
 - Basic speaking and reading ability
 - Ability to follow recording instructions
-

2. Video Recording

What we do: Freelancers record short videos showing people, objects, actions, and everyday activities.

Examples:

- Walking

- Picking up objects
- Opening/closing objects
- Hand movements
- Daily activities
- Object interaction

AI applications:

- Computer vision
 - Object detection
 - Action recognition
 - Video understanding
-

 3. FPS / P.O.V. Recording

What we do: Freelancers record activities from a **first-person point of view** using a smartphone or action camera.

Examples:

- Entering a room
- Picking up an object
- Cooking
- Using a computer
- Shopping
- Performing simple tasks

AI applications:

- First-person AI systems
- Human action recognition
- Robotics
- Real-world environment understanding
- AI assistants

Requirements:

- Smartphone or action camera
 - Ability to follow task instructions
 - Appropriate mounting equipment when required
-

 4. AI Response Rating

What we do: Freelancers interact with AI systems and evaluate the quality of their responses.

Evaluation includes:

- Correctness
- Relevance
- Clarity
- Instruction following
- Factual accuracy
- Logical consistency
- Comparison between multiple AI responses

AI applications:

- Large Language Models (LLMs)
 - AI assistants
 - Human-feedback systems
 - AI quality improvement
-

3. Our Freelancer Network

We build a **distributed network of freelancers** who can perform generalist AI data-collection and evaluation tasks.

Key Advantages

- Large and scalable freelancer pool
 - Remote participation
 - Smartphones available for most recording tasks
 - Multiple voices and perspectives
 - Different environments and locations
 - Flexible workforce
 - Parallel task execution
 - Ability to follow predefined instructions
 - No advanced technical skills required for generalist tasks
-

4. Workflow

Client Requirement

Task Design & Instructions

Freelancer Assignment

Data Collection / AI Evaluation

Quality Checking

Data Organization

Client Delivery

Payment

5. Target Clients

We can provide services to:

- AI companies
 - AI startups
 - Speech AI companies
 - Computer-vision companies
 - Generative AI companies
 - LLM developers
 - AI research organizations
 - Data-collection companies
 - Data-labeling companies
 - Robotics companies
-

6. Business Model

Our platform can operate using different pricing models:

Per Task

Payment for every completed task.

Per Recording

Payment for every accepted audio/video recording.

Per Hour

Freelancers are paid according to the time spent on a project.

Project-Based

A client provides a complete data requirement and we deliver the required dataset.

Quality-Based

Higher payments can be offered for difficult or specialized data-collection tasks.

7. Freelancer Benefits

Freelancers can:

- Work remotely
 - Choose available projects
 - Work flexible hours
 - Perform simple generalist tasks
 - Earn from multiple projects
 - Participate using smartphones
 - Build experience in AI data operations
-

8. Our Value Proposition

For AI Companies

We provide:

Scalable Workforce + Real-World Data + Human Feedback + Quality Control

This allows AI companies to collect diverse real-world data without building a large internal data-collection team.

For Freelancers

We provide:

Flexible Tasks + Remote Work + Simple Instructions + Multiple Project Opportunities

9. Example Project

Client Requirement

An AI company needs **10,000 first-person videos** of people performing everyday activities.

Our Process

1. Client provides recording guidelines.
 2. We divide the requirement into smaller tasks.
 3. Suitable freelancers receive the tasks.
 4. Freelancers record the required videos.
 5. Submitted videos go through quality checking.
 6. Accepted videos are organized according to client specifications.
 7. Final dataset is delivered to the client.
 8. Freelancers receive payment for accepted work.
-

10. Future Expansion

The freelancer network can later expand into:

- Image collection
 - Image labeling
 - Video annotation
 - Audio transcription
 - Text collection
 - Text annotation
 - Screen recording
 - Human-AI conversations
 - AI response ranking
 - Data quality verification
 - Multilingual data collection
-

Core Business Statement

We provide scalable human data collection and AI evaluation services through a distributed network of freelancers, helping AI companies collect real-world data and human feedback efficiently.
